You want your crown or bridge ...

- ✓ to be of outstanding quality?
- ✓ to stay safely and firmly in place?
- ✓ to be reliable for centuries?
- ✓ to be long-lasting?
- ✓ to be highly biocompatible?
- ✓ to look as natural as possible?

Good results for generations

Patients who need dental restorations often feel insecure and have many questions. Fortunately they can rely on their dentists who can give comprehensive advice supported by a network of competent partners. Precious metal alloys have been successfully used for crowns and bridges for a long time now. DeguDent can look back on more than a 100 years of experience in this field and continues to be a leading supplier of high-gold dental alloys.

... then you should ask your dentist about the benefits of DeguDent precious metal alloys.

Precious metal alloys –

Benefits at a glance

- Proven dental alloys
- A wide choice for all demands
- Excellent biocompatibility
- Clinically tested quality
- Long-term stability
- High-quality premium materials
- Natural beauty by aesthetic veneering
- Valuable

An investment that does not depreciate.

DeguDent precious metal alloys are based on a carefully supervised production process and on the experience of many years of extensive clinical testing. This allows us to make a reliable prognosis about the effects of our alloys in the mouth. As a patient, you benefit from the quality, safety and value of our alloys. Nothing is more infuriating than spending time and money on restorations of poor quality that have to be replaced after a short time.

Aesthetics

For many years, high-gold alloys have demonstrated their excellent suitability for aesthetic dental restorations. A ceramic-veneered crown or bridge blends in harmoniously with the appearance of the natural teeth.

Biocompatibility

If conditions are optimal, dental restorations can be worn for many decades. DeguDent offers biocompatible alloys that are free of palladium and copper. This makes them suitable to wear in the long term, even by patients who are hypersensitive to metals and other materials.

Durability

Frameworks made of precious metal alloys are excellently suited for long-lasting dental crowns and bridges. Their remarkable longevity has been demonstrated in numerous clinical tests.

Variety

The choice is yours! You and your dentist can make the decision that suits you best – whether the alloy you choose is high-gold, gold-reduced, especially biocompatible or particularly low-cost.

I was convinced by the natural aesthetics, biocompatibility and safety of long-lasting dental restorations.
